Unit 14, Lee Park, Sitecast Industrial Estate, Pouladuff . Cork, Tel 021-4966560, Fax 021-4966576

Course Title	Role of Designers in construction
Maximum Number of Participants:	10
Duration:	Half day
Certification	

Course details

The role of designers under the Construction regulations places a responsibility upon all designers to design structures that can be constructed and used without risk to the Health and Safety of the users. This places a responsibility on designers to assess the risk associated with their design and to ensure that the general principles of prevention have been adequately applied to the final design.

It is imperative therefore that designers have an in-depth knowledge of their role and responsibilities under relevant legislation as well as a knowledge of the general principles of prevention.

Objectives

On completion of the course participants will have:

- An in depth knowledge of their role and responsibilities outlined under the construction regulations,
- An ability to carry out design Risk Assessments,
- An ability to apply the general principles of prevention,

Programme

- Legislation,
- Design Risk Assessments,
- General Principles of Prevention as applied to design,
- Communication of information to the final occupiers of the structure,
- Practical workshop.
